

A close-up, high-contrast photograph of a pig's snout. The pig's skin is dark, and its snout is a lighter, almost white color. A bright red ring is placed around the base of the snout. The background is dark, making the snout and ring stand out.

get closer

With phosphate feed ingredients from PCS Sales, bioassay testing assures you're getting the best phosphorus uptake and bone mineralization available. This means you can formulate closer to the margins of safety without compromising the nutrition of your livestock. Call Dr. Steve Auman: 847-849-4200.
